

## What do we know about the confinement mechanism?

*среда, 24 июля 2024 г. 12:15 (45)*

I will compare the main confinement mechanisms in QCD, confinement by magnetic monopoles and by quantised magnetic flux tubes, vortices. Then, I will concentrate on problems with the detection of vortices. A further interesting question concerns the relation to the spontaneous breaking of chiral symmetry.

**Presenter(s)** : FABER, Manfred (Atominstitut, Technische Universität Wien)

**Session Classification** : Morning session 24/07/2024

**Track Classification** : QCD (lattice, (non) perturbative, effective models)
